

# Incentive Code Redemption API Methods

Last Updated: Friday, November 15, 2019

An Incentive Code Redemption entity is a record of a Redemption of an Incentive Code.

## Get Redemptions for an Incentive Code

```
GET /companies/:company_id/incentives/codes/:code/redemptions
```

## Response

An array of all Redemptions for the given code.

## Redeem an Incentive Code

```
POST /companies/:company_id/incentives/codes/:code/redemptions
{
  "external_issuee_id": "312",
  "issuee_id": "1234-5678",
  "referring_application": "system",
  "referring_application_ref_id" : "1234"
}
```

## Request Elements

Data Element	Required	Description
external_issuee_id	No	Unique external issuee ID.
issuee_id	No	Vibes-generated issuee ID.
referring_application	No	Application redeeming the code.
referring_application_ref_id	No	Application reference ID.

## Response

It returns a Redemption entity if the code was successfully redeemed.

An *HTTP 422* error code is returned in the following cases:

- When using an invalid *issuee\_id* or *external\_issuee\_id*.
- When using a 'unique' pool type, and the code has already been redeemed.
