

SMPP Gateway Interface

This topic outlines the interfaces and mechanics to connect to the Vibes Connect Platform via Short Message Peer-to-Peer (SMPP) protocol for Mobile Originated (MO) and Mobile Terminated (MT) messaging traffic.

Topics in this Section

Overview

Vibes supports sending short messages using SMPP protocol version 3.4. The Vibes Connect Platform uses the standard SMPP components plus some additional optional parameter values for its product. This documentation should be read in conjunction with the specification, and a familiarity with the SMPP specification is assumed. For reference, the complete protocol can be found at http://docs.nimta.com/SMPP_v3_4_Issue1_2.pdf.
