

White Labeling Vibes Platform

Last Updated: Tuesday, November 17, 2020

Vibes Mobile Engagement Platform white labeling capability lets Partners easily customize their logos and URLs.

Logo

Your logo should have a height of 50px.

The width is flexible.

URLs

The Partner should create CNAME records for any modules listed below that they wish to white-label.

Based on stylistic preference, any host names may be used for the CNAME records, but all host names must be in the same domain.

After configuring these DNS records, provide a complete list of all host names to Vibes; this will allow us to configure TLS properly for the new host names.

We recommend the following:

Module	Host Name	CNAME Alias
Campaign Manager	cm. <i>partner</i> .com	cm-wl.vibescm.com
Mobile Wallet/Pages	mp. <i>partner</i> .com	mp-wl.vibescm.com
Vibes Mobile Engagement Platform Dashboard	mobile. <i>partner</i> .com	dashboard-wl.vibescm.com
Reports	reporter. <i>partner</i> .com	reporter-wl.vibescm.com
Analytics	analytics. <i>partner</i> .com	analytics-wl.vibescm.com

Note: In the Host Name, replace **partner** with your own domain name.
