

Message Redaction

Message redaction allows message content and/or phone number to be redacted for inbound and outbound SMS and MMS messages. Please note the following constraints:

- Message Redaction is enabled by short code. Message Content and/or phone number can be redacted.
- Message copy is replaced with a one-way hashed value that obfuscates the original message copy. Redacted phone numbers are replaced with '999-999-9999'.
- Unredacted data may remain within transactional logs for internal troubleshooting for up to 30 days.
- Historical data will be redacted in a one time process.

Vibes does not recommend using this feature if validation of TCPA compliance may be required. Due to this constraint, this feature is primarily encouraged use with [Connect APIs](#), but it available for SMS only in [Vibes Platform](#) if compliance is managed via another means.
